

Care Coordinator SOP

Your whole day lives on one screen: **Care Coordinator**. It shows who to call and when — the calls themselves happen from each patient's profile.

1 The screen, at a glance

Same colors everywhere: **sky** = Patient Intake, **teal** = Welcome Call — on the day strip and on each column's title dot.

- 1 **Day strip** — every call booked on the calendar, laid out across the day. Flip between yesterday / today / tomorrow with the arrows.

2 **Patient Intake column** — new leads who started the web form and want a call.

3 **Welcome Call column** — approved patients waiting on their welcome call.

2 One card, explained

GREEN EDGE Someone has already tried this patient. Gray edge = not yet touched.

PILLS The facts at a glance: network verdict, form Partial/Completed, insurance, coverage paths. A missing pill means the answer is **unknown** — not "no".

COUNTS & TIMES The small phone and chat numbers are the calls and texts so far. "N days" is how long they've been waiting; a booked card shows its call time.

BUTTONS Each one is explained in the next section.

3 What each button does

And what happens after you press it — nothing here is a mystery box.

ON THE CARD

 **Call** → Rings the patient right in the browser, from the company number, and the pop-up carries the attempt form — you can fill in "What happened on the call?" while still talking. The call lands in their history automatically.

 **Log attempt**

→ The same attempt form **without placing a call** — for right after you hang up. It's also inside the pop-up when you click a booking on the day strip.

 **Communications**

→ A side panel opens on this card: the full text thread and call history in one place, and you can read and send texts from it.

 **Booking link**

→ Opens the calendar link to send the patient — the dropdown picks **Intake call** or **Welcome call**. When the patient books, the time appears on the day strip and their card moves under **Scheduled** on its own.

Open →

→ Opens the patient's own page. **Everything that changes a patient happens there** — the dashboard only reads. Notes, logging an attempt, and Advance all live on that page.

LOGGING AN ATTEMPT — WHEREVER YOU DO IT

Log call attempt

→ Answered or not, three things write to the patient's board row: **"What happened on the call?"** is stamped into their notes as "Call attempt N — ..." (the notes line at the bottom of the card shows it), **"Follow up on"** sets their follow-up date, and the attempt counter goes up — so the card's left edge turns **green** and they slide to **Unscheduled · Future** until that date.

Advance

→ The app saves the data, double-checks it landed, and only then tells Monday to move the patient to the next stage. The card leaves your columns right away. **One press does it** — pressing again only shows an "...is already..." message, and nothing ever sends twice.

ON ITS OWN

Nothing

→ The page keeps itself fresh — it re-reads the boards about every minute, and **Refresh** at the top forces it now. A patient who vanishes from a list has moved forward.

4 How patients sort themselves

Each column is the same 2×2. Nothing to file — every patient lands in exactly one box on their own.

SCHEDULED

Today

A booked call on today's calendar. A booking always wins — it shows here no matter what else is going on. The next call up is shaded darker.

SCHEDULED

Future

Booked for another day. Leave them be — they appear under Today on the right morning.

UNSCHEDULED

Today

No booking, and due: their follow-up date is today, past, or blank. Blank means **call them** — nothing else brings a dateless patient back.

UNSCHEDULED

Future

You logged an attempt, so their follow-up date moved to the next day. They return to Today on their own.

The lists sort themselves too: booked calls by their time, everyone else longest-waiting first.
